

TABLE OF CONTENTS

Introduction	i
Chapter 1: Sums of Independent Random Variables	1
1.1. Lévy Type Maximal Inequalities	2
1.2. Hoffmann–Jørgensen Type Inequalities	7
1.3. The Khinchin–Kahane Inequalities	15
1.4. Moment Bounds	20
1.4.1. Maxima	20
1.4.2. Estimating L_p -Norms in Hilbert Space	23
1.4.3. K -Function Bounds	28
1.4.4. A General Decoupling for Sums of Arbitrary Positive Random Variables and Martingales	31
1.5. Estimates with sharp constants for the L_p -Norms of Sums of Independent Random Variables: the L -Function	34
1.6. References for Chapter 1	47
 Chapter 2: Randomly Stopped Processes with Independent Increments	 1
2.1. Wald’s Equations	2
2.2. Good–Lambda Inequalities	9
2.3. Randomly Stopped Sums of Independent Banach Valued Variables	11
2.4. Proof of the Lower Bound of Theorem 2.3.1	15
2.5. Continuous Time Processes	29
2.6. Burkholder–Gundy Type Inequalities in Banach Spaces	31
2.7. From Boundary Crossing of Non–Random Functions to First Passage Times of Processes with Independent Increments	35
2.8. References for Chapter 2	45
 Chapter 3: Decoupling of U-statistics and U-processes	 1
3.1. Decoupling of U -Processes: Convex Functions	2
3.2. Hypercontractivity of Rademacher Chaos Variables	13
3.3. Minorization of Tail Probabilities: the Paley–Zygmund Argument and a Conditional Jensen’s Inequality	21
3.4. Decoupling of U -Processes: Tail Probabilities	27
3.5. Randomization	38
3.5.1. Moment Inequalities for Randomized U -Statistics	40
3.5.2. Randomization of Tail Probabilities for U -Statistics and Processes ..	46
3.6. References for Chapter 3	51
 Chapter 4: Limit Theorems for U-Statistics	 1
4.1. Some Inequalities. The Law of Large Numbers	2
4.1.1. Hoffmann–Jørgensen’s Inequality for U -Processes	2
4.1.2. An Application to the Law of Large Numbers	7

4.1.3. Exponential Inequalities for Canonical U -Statistics	11
4.2. Gaussian Chaos and the Central Limit Theorem for Canonical U -Statistics	20
4.3. The Law of the Iterated Logarithm for Canonical U -Statistics	33
4.4. References for Chapter 4	51
Chapter 5: Limit Theorems for Degenerate U-Processes	1
5.1. Some Background on Asymptotics of Processes, Metric Entropy and Vapnik-Červonenkis Classes of Functions: Maximal Inequalities	2
5.1.1. Convergence in Law of Sample Bounded Processes	2
5.1.2. Maximal Inequalities Based on Metric Entropy	8
5.1.3. Vapnik-Červonenkis Classes of Functions	14
5.2. The Law of Large Numbers for U -processes	19
5.2. The Central Limit Theorem for U -processes	29
5.4. The Law of the Iterated Logarithm for Canonical U -Processes	44
5.4.1. The Bounded LIL	44
5.4.2. The Compact LIL	47
5.5. Statistical Applications	54
5.5.1. The Law of Large Numbers for the Simplicial Median	54
5.5.2. The Central Limit Theorem for the Simplicial Median	61
5.5.3. Truncated Data	70
5.6. References for Chapter 5	77
Chapter 6: General Decoupling Inequalities for Tangent Sequences	1
6.1. Some Definitions and Examples	2
6.2. Exponential Decoupling Inequalities for Sums	6
6.3. Tail Probabilities and L_p Inequalities for Tangent Sequences I	11
6.4. Tail Probabilities and L_p Inequalities for Tangent Sequences II: Good Lambda Inequalities	17
6.5. Differential Subordination and Applications	21
6.6. Decoupling Inequalities Compared to Martingale Inequalities	24
6.7. References for Chapter 6	32
Chapter 7: Conditionally Independent Sequences	1
7.1. The Principle of Conditioning and Related Results	1
7.2. Analysis of a Sequence of Two-By-Two Tables	6
7.3. Sharp L_p Comparison of Sums of Arbitrarily Dependent Variables to Sums of CI Variables	12
7.4. References for Chapter 7	23
Chapter 8: Further Applications of Decoupling	1
8.1. Randomly Stopped Canonical U -Statistics	1
8.1.1. Wald's Equation for Canonical U -Statistics	1
8.1.2. Moment Bounds for Regular and Randomly Stopped U -Statistics	9
8.1.3. Moment Convergence in Anscombe's Theorem for U -Statistics	13
8.2. A General Class of Exponential Inequalities for Martingales and Ratios	18

8.3. References for Chapter 8 26
