Dear all,

A first WebAssign homework is now available online. Here are few comments and instructions:

How to access WebAssign: Login to HuskyCT using your NetID and password. Then choose Math 1152Q. On the left panel, you should see “WebAssign Homework”. Click on this. You will then enter WebAssign. Note that you can use WebAssign freely for two weeks. **Use Firefox or Google Chrome.** For other browsers, WebAssign may not work properly.

Access code: At the third week of classes, you will need an access code to continue using WebAssign. If you buy the textbook at the bookstore, you should buy the one bundled with the WebAssign access card for this course. If you already have an old textbook, but no access card, then you can buy an access code online by first following the instructions in the previous paragraph (so you need to login to WebAssign through HuskyCT). When you first enter WebAssign you will get three options and one of them is for buying an access code. WebAssign access code alone is quite expensive. The reason is that WebAssign comes with an online version of the textbook.

First Homework: If you don’t have an access code, just use the free trial. The first homework is called “First Assignment on 5.1 and 5.2”. Click on it. Read the instructions on top. For each question, you have 5 attempts. You can submit the answer for each question individually. After one attempt, sometimes, you will get more options, such as hints. If you have a question, please email me directly, and don’t use the email within WebAssign: I rarely get them. When you click on an answer box, you will sometimes see a “CalcPad” panel that you can use to write your answer. It will be very helpful for problems 3 and 5. It is very intuitive. Don’t forget to use parentheses and check that parentheses match. When you enter an answer with a decimal representation, try to be very precise. Try to login as soon as possible, so that if there is an issue, you will have enough time to contact me.
